About Company

Wavu Labs Ltd. is a software development and IT consultancy company focused on building next generation web applications in Web3, fintech applications, data analytics and new paradigm Web2 applications cutting across all industries and sectors.

OUR CORE SERVICES

Here is a list of the main services we offer to clients

We offer IT consultancy; which includes both advisory and implementation services. Data Analytics is already a core company function cutting across most of our projects but our expertise spans across Software Management, Enterprise Resource Planning(ERP), Systems Integration & IT security, strategy, implementation and architecture,

Consultancy Services

We build, on contract, for our clients general or bespoke systems, applications or websites. These include fintech applications, dapps/web3 applications, databases, business management and analytics tools and a myriad of other enterprise level or small scale systems and applications.

**Software
Development**

We offer both software and hardware maintenance support for all types of businesses, organizations or firms. These include quality customer care, remote and on-site maintenance, strategic repair and replacements, easy to implement (and understand) solutions & warranty services.

Maintenance

VISION

To be at the forefront of building the next generation of software products and services in the region as a driver of the ongoing fourth industrial revolution.

MISSION

Our core mission is to be at the driver's seat of the fourth industrial revolution in the region bringing the best of the web, AI, distributed systems and the token economy together into the most balanced and sensible blend that will give our products an edge into the region's future through a robust network of innovative platforms that capture, revive and improve what has been left behind by the past tech and industrial revolutions.

Our Goals

Sustainable Software Products

With the rise of, and need for, shareholder capitalism, we aim to bring to market products with sustainable business and internal economic models that offer flexibility to the company and adequate incentive structures to the users and/or investors.

Research Intensive Products

We aim to be very analytical in our software development process and market approach. We understand the value of robustness and we aim to meet this need through intensive research in all our products.

Dominate Next Gen Web

This region is home to a bulging youth population which is tech savvy and hence is prime in terms of human resource and a consumer market. Web3 is a primary focus of this company and we have a well reasoned and balanced approach to the development of both abstract and derivative tokens in applications that are resilient.
